CarbonLock Global

Engineered biology for a stable climate.

Investor Overview

Scalable Biological Carbon Removal for a Net-Negative Future

CarbonLock Global is developing a large-scale biological carbon removal platform designed to permanently remove atmospheric carbon dioxide through marine algae cultivation, biomass sequestration, and integrated renewable energy recovery.

Our vision is to create an infrastructure-based carbon removal solution capable of deployment across suitable coastal regions worldwide, contributing meaningfully to global net-zero and net-negative emissions targets.

The Global Challenge

The world must remove billions of tonnes of carbon dioxide from the atmosphere each year to meet climate objectives.

Most carbon removal pathways face challenges including:

- High energy requirements
- High operating costs
- Limited scalability
- Complex infrastructure demands
- Uncertain long-term storage outcomes

The market is seeking durable, verifiable, scalable carbon removal solutions capable of operating at industrial scale.

The CarbonLock Solution

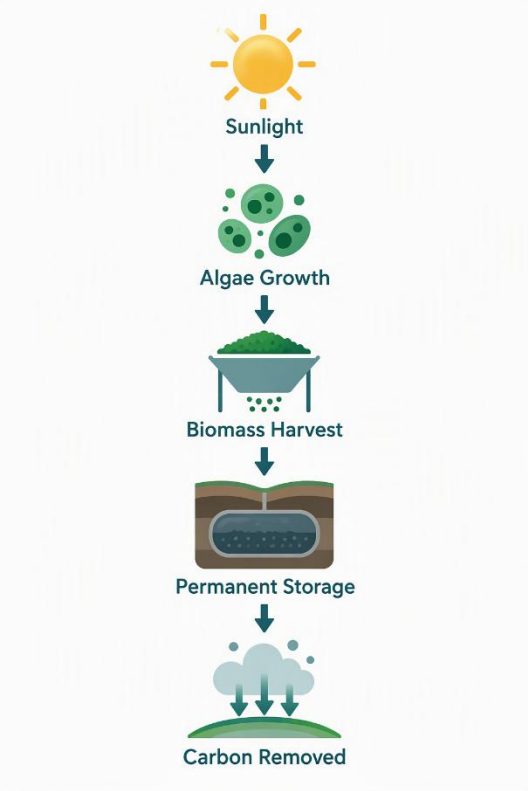

CarbonLock Global is developing an integrated biological carbon removal platform built around five key components:

1. Atmospheric Carbon Capture

Marine algae naturally absorb carbon dioxide through photosynthesis, utilising sunlight as the primary energy source.

2. Large-Scale Biomass Production

Coastal seawater pond systems provide a scalable cultivation platform capable of producing significant biomass volumes.

Illustrative concept pathway

3. Nutrient Recovery

Where appropriate, wastewater-derived nutrients may be incorporated to support growth while contributing to circular resource use.

4. Permanent Carbon Storage

Harvested biomass is intended to be stored in engineered facilities designed for long-term carbon sequestration and minimisation of atmospheric re-release.

5. Renewable Energy Recovery

Controlled methane generation and energy recovery may provide complementary renewable energy benefits while enhancing project economics.

Why CarbonLock Global Is Different

CarbonLock Global combines:

- ✅ Biological carbon capture
- ✅ Large-scale infrastructure thinking
- ✅ Permanent sequestration focus
- ✅ Resource recovery opportunities
- ✅ Potential renewable energy co-benefits
- ✅ Global deployment potential

The approach seeks to leverage proven engineering principles and natural biological processes to create a practical pathway toward durable carbon removal.

Market Opportunity

Global demand for verified carbon removal is expected to grow substantially as governments, industries, and corporations pursue net-zero commitments.

Potential future customers and stakeholders include:

- Carbon credit purchasers
- Heavy industry
- Mining companies
- Energy companies
- Utilities
- Governments
- Sustainability-focused corporations

CarbonLock Global is positioning itself within the rapidly emerging carbon removal sector.

Founder

Kevin Bartlett

Senior Civil Water Engineer

Nearly 40 years of experience in major water infrastructure planning, design and delivery.

Key strengths include:

- Large-scale infrastructure development
- Water storage systems
- Dam engineering
- Project planning and risk management
- Long-term asset stewardship
- Environmental and resource management

CarbonLock Global brings together infrastructure delivery expertise with a vision for scalable climate solutions.

Current Stage

Completed:

- Concept development
- Initial systems architecture
- Corporate establishment
- Website and stakeholder engagement platform

Next Phase:

- Carbon accounting methodology
- Feasibility assessment
- Site screening
- Pilot project design
- Independent technical review
- Early strategic partnerships

Investment Opportunity

CarbonLock Global is seeking engagement with:

- Impact investors
- Climate-tech investors
- Strategic industry partners
- Philanthropic climate funds
- Government funding programs

Funding will be directed toward concept validation, technical de-risking, feasibility development, and pilot-stage deployment planning.
